

Capturing evidence digitally

Easy expert access to information and evidence

Presentation at court

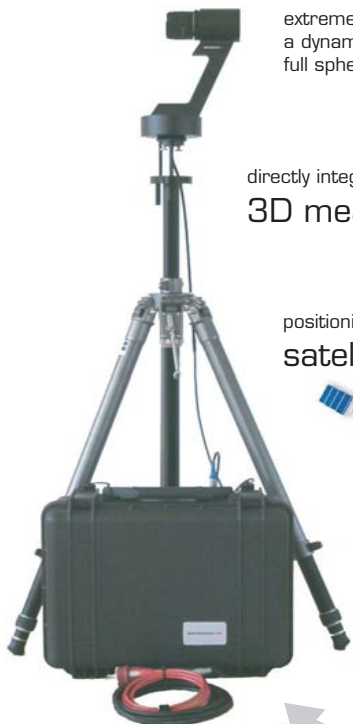

digital forensics

overview

www.spheron.com

The SpheroCamHDR on location,

extremely detailed images with up to 400 Megabyte per image, a dynamic range of 26 f-stops full spherical view in every direction [360°x360°],

directly integrated 3D measurement technology,

positioning via satellite navigation GPS,

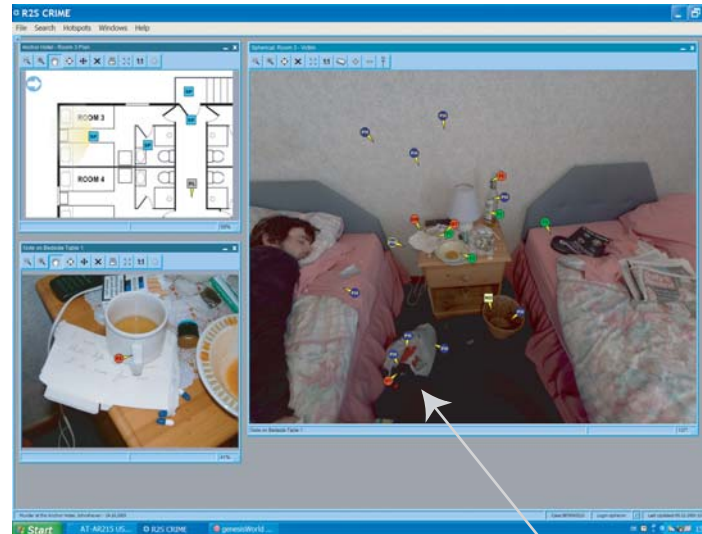

connected to a mobile data storage system,

adding a manipulation proof digital signature to the full-spherical image.

this proves: this image is an original!

Combined with the collaboration soft-ware, every piece of evidence can be linked visually within the full-spherical images.

All information related to a certain case can now be managed much faster and on a higher level of professionalism.

- easy to overview structure
- visual links to all kind of information like maps, GIS-data, videos, photos, voice records, laboratory reports and many more
- integrated 3D measurement within the full-spherical images

Symbols refer to **details** of the evidence found. A single mouse click shows all the information gathered and expert results obtained.

Colors show the current state of investigation.

All evidence collected is transferred to a server and can then be utilized by all authorized users via network.

Now it is very easy to get a quick overview of the case and as well to get a much better understanding of all the case related information.

No more data loss and no more duplication of data is required.
